PROJECTS:

Snake Game

Basic Snake Game using C++ the snake grows when eats, control snake and hit the leader board as high as u can.

Scholarship Management System

It is a part of CMS of PUCIT. A complete auto system in applying the Scholarships Students Profile Management and keep track of application status and keep database updated.

Tuition Management System

A fully automated website using .net, JS, J Query, Html, CSS, AJAX, Session handling.

Bakery Management System

It is a database related project. Frontend is design on excel sheets. First we make ERD (Entity Relationship Diagram), identify primary and foreign keys, perform normalization and then run queries to insert and fetch data from tables.

Birds Classified

Internship project

It is a dynamic website inspired from OLX. It is built in **Laravel** using php and MySQL. A seller can add post to sell his birds and buyer will see all the birds with their prices and can contact with the seller to get his required bird.

Dental Charting System

php (Laravel)

It is a big project. I worked on the module named maintenance. It has lot of features, basic crud operations are performed, lot of JQuery and Ajax is used on this module. Several business rules in the form pagination and searching is also used in this application.

Blood Management System

php (Laravel)

This project consist of 2 modules, Admin and User. User can register yourself for blood donations while admin can perform crud operations on the sub-modules. Several Business rules in the form of pagination, searching, authentication etc. is applied on this web application.

Vidly

php (Laravel)

It is a simple website related to **rental** movie system. Basic crud operations are performed in this with addition function, applying business rules, use APIs. It is also build in LARAVEL php framework.

COMPETITIONS

Compete in sports (cricket) and chess competitions in university.
